

Distributor Partners,

After 35 years, STI has decided to discontinue our Firestop Mortar product line.

The following products will no longer be offered:

- SSM106 – Firestop Mortar, 6-gallon pail
- SSM22B – Firestop Mortar Bag

While firestop mortar has served the industry well for decades, modern construction increasingly relies on more flexible, labor-efficient solutions for large openings. Products such as firestop pillows, blocks, and composite sheets are now the preferred choice for many applications due to their ease of installation, re-entry, and maintenance.

As demand for mortar-based firestopping has declined, we've chosen to focus on the solutions most widely used in today's construction market.

If you have open purchase orders, an STI representative will be reaching out to you. For assistance identifying alternative STI solutions, please contact your local STI representative.

Thank you for your continued partnership.
